MNRI® Reflex Integration and Learning

Dates: Apr 20-21, Apr 27-28
Online Course With Diane Whiteside

Course Overview:

Learning challenges often result when reflex patterns do not activate, mature, or integrate as they should. In fact, data collected from thousands of MNRI assessments over the past 20 years demonstrates that as the number of non-integrated primary motor reflex patterns increase, the number and severity of learning challenges correspondingly increase. The Reflex Integration and Learning course explores the role reflexes play in developing higher order cognitive function. Understanding this connection, in combination with understanding the MNRI techniques available to assess, pattern, and integrate dysfunctional reflexes, can help learning challenged individuals move closer to reaching their full learning potential.

The Reflex Integration & Learning course explores:

- The general MNRI Method and the role motor reflex integration plays in learning
- The progression of the primary skills necessary for learning
- MNRI techniques designed to assess, pattern, and integrate motor reflexes
- How to create MNRI reflex integration programs for individual clients
- How to incorporate MNRI Reflex Integration and Learning course content into daily client and home practice
