

# MNRI® Workshop for Parents - Part 3

**Dates: February 10-11, 2022**

**Online Course With Suzanne Amanor-Wilks**

MNRI Workshop for Parents - Part 3

Please Note: Students do not need to attend parts 1 or 2 in order to attend part 3.

Course Overview:

Learning, planning, and the development of inner control are some of the most important functions of the brain and are the basis of successful learning. The development of self regulation, language and academic skills depends on the appropriate development of the brainstem and sensorimotor integration. The early movements, primary motor and reflex patterns offered in this workshop are the foundation of human development. Successful formation of these abilities ultimately depends upon the physiological maturation of the brainstem (extrapyramidal nerve net) for movement, behavioral and learning.

Challenges often result when reflex patterns do not develop properly, are immature, and/or are poorly integrated in comparison with typical patterns of development. In addition, primary reflex patterns may not function appropriately following significant life stressors and/or trauma that children and adults may experience. Data collected from thousands of MNRI sessions over the past 20 years has demonstrated that as the number of non-integrated primary motor reflex patterns in neurotypical children increase, a correlation in the number and severity of learning challenges becomes apparent.

This MNRI Parent workshop explores the role primary movements and reflexes play in developing higher cognitive functions, motor and communication skills.

MNRI Workshop for Parents explores:

- The theoretical and physiological basis of the MNRI Method and the role primary sensori-motor reflex integration plays in learning
- The progression of primary skills necessary for optimal learning and self regulation
- MNRI techniques designed to re-pattern and integrate specific reflex patterns
- Ways to create MNRI reflex integration programs for children
- Ways to incorporate this program into daily home practice.

Learner Objectives:

Upon successful completion of the 8 hours for the MNRI Workshop for Parents, participants will:

1. Understand how the Masgutova Neurosensorimotor Reflex Integration (MNRI ") method is based on activation of the innate nature of the sensorimotor reflex system to increase self-regulation

2. Comprehend how the primary motor patterns as the first biomechanics of development of all movements can create or restore healthy neurosensorimotor integration of reflex patterns, motor coordination, and skills affecting cognitive, emotional and physical functioning as well as neurodevelopment overall.
3. Explore the maturational role that the primary sensory- motor reflexes play in the formation of specific academics and social skill sets that affect self-regulation.
4. Recognize how the lack of consistent development of primary sensory-motor reflexes impact the development of positive learning, behavioral, and social skills.
5. Explore the specific MNRI techniques used for working with children and adults diagnosed with ADD, ADHD, Dyspraxia, Anxiety, and other challenges.
6. Demonstrate how the MNRI® reflex patterns can be used to increase listening skills and focus, safety for boundaries for safety, handwriting, spatial awareness, increased language and cognitive skills, as well as the reduction of stress.
7. Explore how to use the knowledge received in this workshop on an individual basis.
8. Apply and practice specific MNRI® hands-on training provided for specific reflex patterns.

Agenda:

Hour 1: Background information of reflexes and MNRI®

Hours 2-8: MNRI® Techniques: Explanation, Demonstration, Practice

Course Hours: 8

---

**Financial Disclosure:** Suzanne Amanor-Wilks receives a stipend based upon an enrollment percentage.

**Non-financial Disclosure:** No relevant relationship exists.

**Course Disclosure:** *The Svetlana Masgutova Educational Institute has developed and patented a licensed technology trademarked as MNRI®. Because there are no other like-kind products available, course offerings will only cover information that pertains to the effective and safe use of the above-named products. This presentation will focus exclusively on MNRI® and will not include information on other similar or related products or services.*

**Special Needs Requests:** If you require special accommodations, please notify SMEI at [events@masgutovamethod.com](mailto:events@masgutovamethod.com) at the time of registration so that needed accommodations can be made prior to the course.

**Course Completion Requirements:** Full attendance is required to receive a certificate of completion and any available credit hours or CEUs.

**Target audience:**

Speech Language Pathologists, Speech Language Pathologist Assistants, Occupational Therapists, Certified Occupational Therapy Assistants, Nurses, Physical Therapists, Physical Therapist Assistants, Educators, Psychologists, Physicians, Massage Therapists, Mental Health Counselors, Other Health Care Providers, Parents.

**Additional Information and Registration:**

For more information or to register, visit <https://masgutovamethod.com/events?2201>.
