

MNRI® Neurosensorimotor Reflex Integration Points

Dates: November 17-19, 2017

With Dr. Svetlana Masgutova

Location: Orlando, FL

Course Overview:

The MRNI Method focuses on very specific neurosensorimotor and neuroproprioceptive reflex points. Although there is generally a preferred point for each reflex, these most optimal points are not always active and an alternative point must be chosen to integrate a poorly functioning reflex. The MRNI Method delineates the full range of these reflex points as one or more may be accessed as needed for success. The Neurosensorimotor Integration Points course teaches participants to apply the full range of reflex points and to make accurate judgments about which to choose and why when integrating a specific reflex. This course also reinforces prior instruction on completing assessments and applying proper MNRI technique. The main focus, however, is on understanding neurosensorimotor and neuroproprioceptive reflex points and how to select the optimal points in applying the MNRI Method.

The prerequisites to be in the class are being at least a level 4 core in training.

In order to be ready for this class, it is necessary for your hands to be strong and able to handle the work.

Please use a round, doughnut-shaped rubber therapy tool, or a handgripper to strengthen your hands (see picture below). If tested the first day until the class starts. Your hands will be h. Also, please do some type of cardio exercise for two weeks prior to the
